TL;DR

Build a tent assortment around the space a customer needs to use, the way the shelter is carried and the setup format. Keep three measurements separate in your product sheet: the erected dimensions, any separately stated inner dimensions, and the packed dimensions. They answer different questions. Erected dimensions describe the listed outline; inner dimensions help plan the sleeping layout; the packed size helps compare storage and transport. A packed bag is not an export carton. Record the product version alongside every measurement so a larger model's dimensions are never paired with a smaller model's weight.

Keep the comparison traceable

Keep one specification sheet for each shortlisted version. Put the product URL, size, colour and dated photographs at the top, then distinguish published facts from requested changes. If the brief combines a tent, a cooking item and clothing, give each its own line and quantity. Their dimensions, materials and accessories describe different things and should not be merged into a single specification. For example, a tent's packed length is a storage measurement, a kettle's external dimensions do not state its usable

capacity, and backpack litres do not describe torso fit. When a field is absent, leave it marked for confirmation instead of borrowing a value from a visually similar item. Before comparing quotations, check that they refer to the same version and supply scope. Record any substitutions explicitly, including the affected component, colour or packaging. This makes later sample review more useful: the reviewer can compare an identified item against a written requirement instead of trying to reconstruct a decision from a photo and a price.
